

a 测角并求交 · $L = W_1 \cap W_2, \varepsilon = 1^\circ$

b 同一 L 放大 · 直径 $\rightarrow$ 最小包围圆

$D = 39.598 \text{ m}$ $R_{\text{MEC}} = 19.799 \text{ m}$ $D/2 \leq R_{\text{MEC}} \leq D/\sqrt{3}$ 上界圆 $D/\sqrt{3} = 22.862 \text{ m}$ 仅作半径比较
左图角域按真实 $\varepsilon = 1^\circ$ 绘制；右图多边形、直径端点与圆心均继承左图求交结果，不是重绘对象。
